

Underground double skin tanks UNE-EN 12285-1

Horizontal cylindrical steel tanks for the underground storage of flammable and non-flammable water-polluting liquids.

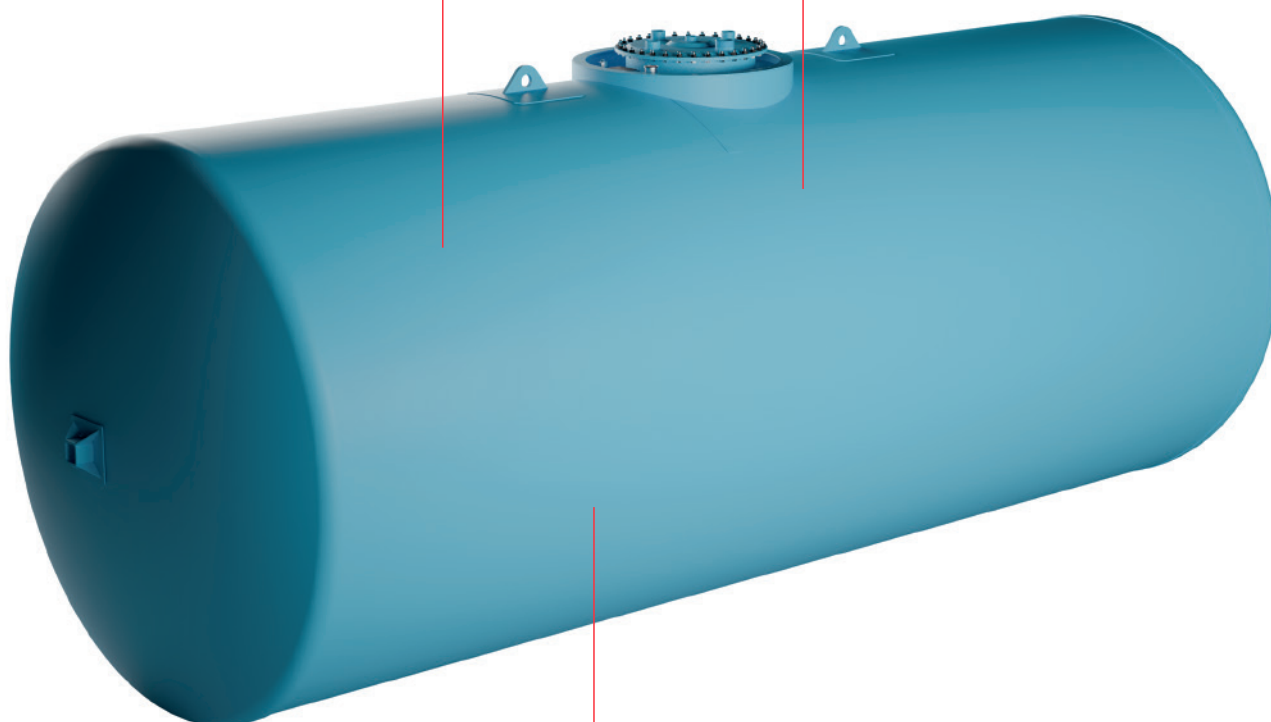

Manufactured in accordance with European standard EN 12285-1 Class A.

CUSTOM MANUFACTURING

From 1,000 to 120,000L,
with multiple options
and accessories.

MAXIMUM DURABILITY

6,000V resistant coating;
shielded against galvanic corrosion.

TOTAL PROTECTION

Double-walled design with leak detection.

CERTIFIED
ISO 9001

CHARACTERISTICS

- Built in accordance with UNE-EN 12285-1.
- For the storage of all types of hydrocarbons, fuels, alcohols, ethanol, biofuels, AdBlue... and flammable, corrosive, toxic, and/or polluting chemical products.
- External epoxy resin coating with a minimum thickness of 700 microns and electrical resistance exceeding 6,000 V.
- Vacuum leak detection system via vacuum gauge.

OPTIONS

- Manhole Frame for access chamber/sump frame.
- Pre-installed Accessories: Overfill prevention valve, suction line, dipstick...
- Internal Compartmentalization for storing various products within the same tank.
- Quick-Anchor Chassis
- Internal linings for fuels or specific chemical products.
- AISI-304L or AISI-316L stainless steel.
- Special dimensions.

Capacity (L)	Diameter (mm)	Length (mm)	Weight (Kg)
1.000	915	1.920	410
1.500	1.265	1.700	520
2.000	1.265	1.950	625
3.000	1.515	2.000	820
5.000	1.515	3.250	1.120
5.000	1.915	2.150	1.125
8.000	1.915	3.150	1.725
10.000	1.915	3.900	2.025
12.000	1.915	4.650	2.325
15.000	1.915	5.700	2.775
